

Central Ohio Vision and Eyecare

ORTHOKERATOLOGY AGREEMENT

OrthoK is the science of changing the curvature of the cornea to change how light is focused on the retina. Wearing the lenses while you sleep will reshape your cornea and should allow you to see without any correction the next day. OrthoK is a temporary correction and relies on consistent application to work correctly.

You will initially have a consultative visit that determines if you are a candidate for OrthoK treatment or not - **this does not cost anything**. If you are a candidate and decide to proceed with OrthoK lenses, the doctor will design and order your lenses - **this costs between \$1000 and \$2500 and is your only initial expense**. They will arrive in about a week, at which point an appointment will be set up to teach you how to insert and remove them, when to wear them, and determine how they are fitting. The doctor may make changes at this point, and reorder your lenses. That is included in your initial fee and may happen between two and five times, depending on the complexity of your eyes and how you progress with the treatment.

Once the doctor is satisfied that the correction is excellent and you are happy with your vision, comfort and care of lenses we will schedule a six month follow up. This is critical to ensuring that if there are changes we can compensate for them. We also deep clean your lenses to ensure that any protein buildup is removed entirely for the next six months.

- I will attend and arrive to all appointments on time.
- I will only use the prescribed lens care system.
- I understand that OrthoK results do vary, and that the doctors are here to help achieve the best possible results with your treatment.
- I understand that OrthoK is a wholly out of pocket expense.
- I agree to comply with the prescribed wearing schedule.
- I understand that these lenses are free from chips and defects, and once in my possession are entirely my responsibility to care for.
- I understand that not following the instructions will lead to complications.

I authorize Central Ohio Vision and Eyecare to fit me in orthokeratology lenses so that I can reduce my dependence on glasses and/or contacts.
